

Heat cable replacement

Place door interior side up on supports.

The heat cable is ran through a cavity in the door, proceed as follows.

- 1- remove cap plugs at top corner of door to expose access holes
- 2 – remove hardware & pull up rubber at bottom of door to expose access slots
(hardware not shown)
- 3 - remove cover from electrical box on T.E. to expose heat cable leads
(electrical box not shown)
- 4 – attach new cable lead to the top door cable lead and pull cable up from top access hole.
- 5 – as old cable is pulled the new cable will insert itself inside the door.
- 6 – replace bottom hardware /top cap plugs & electrical box cover
- 7 – re hang door
